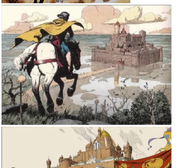
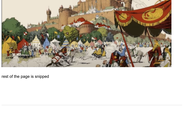
No.33: Hal Foster

Hal Foster was another cornerstone of the comic medium, developing the form with his ascent on draughtsmanship, attention to detail and experimentation with chiaroscuro, naturalism and cinematic action. Along with contemporaries Milton Caniff, Burne Hogarth and Alex Raymond, he was the progenitor of the adventure comic strip. His key series, *Prince Valiant*, was a stately Arthurian work that was painstakingly illustrated and coloured, setting the standard for newspaper strips, with Foster preferring to use captions rather than speech bubbles, which lent it a literary, fine art feel. In many respects, it was the antithesis of the contemporary trend of texture and instinctive subtlety has been the template and main influence for countless artists that came after him, from Frazetta to Kirby to Kubert amongst many. **Words: Andrew Colman...**

Growing up in Canada, Foster was largely self-taught as an artist, obsessing over his craft from an early age while studying classic illustrators such as Wyeth and Rackham. In 1921, after trying his hand at freelancing, Foster made his way to the Chicago Art Institute as well as other academies to refine his skills. After settling in the U.S., Foster got work drawing magazine covers before being taken on by United Features in 1927 to turn Edgar Rice Burroughs' *Tarzan* into a serialised newspaper strip. From 1931, after two years drawing the duties, Foster focused exclusively on the Sunday episodes, and within two years began to develop the strip due to her interest and also to differentiate it from the daily strip, which was by Rex Maxon. Initially, despite his reaching new heights as an artist on Tarzan, Foster began to lose interest in the character and came up with his own property with which he would have full creative control - *Prince Valiant*.

Despite the phenomenal success of Tarzan, both as a strip and within pop culture in general, Foster was frustrated by the lack of control he had over the character, with the publishers and owners, Randolph Hearst, Hearst offered Foster not just complete artistic control (one assumes Rift Gonee was taking notes) but also 50% of the gross for the strip, which was an unsurpassed deal at the time. Within a few months *Prince Valiant* was given a full page by Hearst, allowing Foster the space to develop not just his artistry but the parameters of the medium. *Prince Valiant* was a feast for the eyes and senses, with Foster providing an epic, layered and long-running medieval saga that combined fantasy with realism, humanizing his characters while carefully delineating plots that took in a considerable ensemble who were allowed to age. His painterly, elegant, if not bombtoxic style and broad colour palette meant that *Prince Valiant* was practically unrivalled in terms of its visual presentation. His storytelling and world building also set the standard - one can see look at a *Prince Valiant* page, not need a single word and know exactly what the story is, what the characters are thinking, and what their emotions are, while his mythical world seems palpably real, with backstory, humour and depth.





One of the true legends of the newspaper strip art that would have such an impact on the comic medium, Foster's art has remained required reading for most professionals in the industry and is a byword for the hard work and commitment involved in producing such masterworks.
